

Rescue Basket

P/N DAC3010

The Dacon Rescue Basket is a power-assisted rescue system suitable for most vessels and ideal for those with little deck space. The basket is one of the most stable and rugged rescue baskets on the market. Its aluminium construction makes it strong enough to hold multiple people at once – ideal for mass rescue of people in a conscious state. The basket is easily operated using a deck crane.

The Dacon Rescue Basket meets the UKOOA, NMD and various classification societies for use onboard standby vessels.

Features

- Stable and effective method of recovery
- Perfect for mass rescue situations
- Rugged aluminium construction with soft padding
- Low floating position for easy entry
- Quick- folding lifting mast for convenient stowage
