

Rescue Net

(small/medium size vessels)

The Dacon Rescue Frame is a rescue net designed for effective man overboard recovery. During an emergency, the net is easy to deploy and use for the crew, to recover exhausted, seriously injured, or unconscious persons from the water.

The casualty is positioned in the cradle and gently rolled onboard by lifting the grip bar or the retrieval lines. With the optional hydraulic drum and davit, recovery can be performed single-handed.

Dacon Rescue Frame is suitable for small and medium-sized vessels. It is movable, foldable and takes up little space when stowed on board. The Rescue Frame doubles up as a climbing net, allowing physically capable individuals to climb onboard.

Features

- No mandatory service intervals
- Visual inspection by crew only
- Compact dimensions when stowed
- Standard FRC model: 180 x 20 x 20cm, 12kg
- 5 year warranty
- Production allows for any dimension required
- Standard models 180cm long for full horizontal body support
- Intuitive use, no instructions required
- Doubles as scrambling net, stretcher and boarding ladder
